

Reality Check

Mercury Or Polychrest

Some of the homeopaths are asking about their cured cases, and if I am not wrong about the polychrest remedies. Some of the polychrests are in the 100 remedies of Archæi Mother Mary and Archangel Raphael' their every day list. However, you see that the Archangels use especially the Mercury remedies, and *you do not understand mercury.*

*mercurius solubilis or *mercurius sulphuricus = *merc
 mercurius acetiosus
 mercurius arsenicicus
 mercurius bromatus
 mercurius bi-iodatus = *merc-i-r,
 *mercurius bisulfuricus
 mercurius biniodatus = *merc-i-r,
 *mercurius corrosivus
 mercurius chloriodatus
 mercurius cum kali = aethi-m.
 *mercurius cyanatus
 *mercurius dulcis
 mercurius flavus = merc-o-f.
 *mercurius fluoratum
 *mercurius iodatus flavus
 *mercurius iodatus ruber
 mercurius biniodatus cum kali iodatum
 mercurius lacticus

mercurius methylenus
 mercurius nitricus
 *mercurius nitdcus oxydulatus = merc-ns.
 mercurius nitlosus
 mercurius oxy-cyanaus
 mercurius oxydatus niger = *merc.
 mercurius oxydatus = *merc-pr-r.
 mercurius oxydatus flavus
 mercurius phosphoricus
 mercurius proto-iodatus = *merc-l-f.
 mercurius proto-nitricus
 mercurius proto-iodatus = *merc-i_f,
 *mercurius praecipitatus albus
 *mercurius praecipitatus flavus
 *mercurius praecipitatus ruber
 mercurius proto sulphatum
 mercurius rhodanatus
 mercurius solubilis halmemarmi = *merc
 *mercurius sublimatus = *merc-c
 *mercurius sublimatus corrosivus = *merc-c.
 mercurius sulphocyanatus
 *mercurius sulphurafus niger = aethi-m.
 *mercurius sulphuratus ruber = cinnb.
 *mercurius sulphuricum
 *mercurius salicylicus
 *mercurius sulphuricus
 *mercurius tannicus
 mercurius vivax = *merc.
 mercurius vivus = *merc.

* Mercury medicines. One or more used in every recipe for chronic disease.

MOTHER MARY: You see how it is that Hahnemann uses *Mercurius Vivus* and this was not the mercury I use for the general mercury for colds and flus but *Mercurius Sulphuricus*. He would then go to prove *Sulphur* in hundreds of pages for such a translation made in his mind of his own making and towards his undoing as *Sulphur* is not used that much generally.

Typist: Was that translation of Hahnemann done with Kent? He would combine Calcarea and Phosphorus and just made it 50-50 of each medicine. He worked with Kent to publish.

BURNJEH, Physician: It is how Hahnemann thought. Whether he instructed Kent, we cannot say. It can have this effect in some cases, definitely not all, You would miss Calc-Phos doing this, which is an important medicine.

ANDREA of Chicago: In the Microsoft dispensation, yes, several people did have sight and hearing. You know that Czar Peter was sponsored by Elohim Astrea to bring about the beautiful art. And Bill Gates was Czar Peter.

NANCY of Oregon: To carry on such a dispensation requires contacting Hierarchy.

Typist: In the teaching of Moshe on *Apis Mellifica*, you see how valuable is this medicine for the Egyptian slaves. It is however used not only by this class of people. It was used by Jewish people in concentration camps who were of the upper class.

We spoke to Boenninghausen about his repertory, we asked him, how did you make up your repertory? And he said, he looked at the classes of people. Under the Hahnemann approach, you on the other hand look at classes of plants and animals.

Certain medicines are rarely used such as *Ignatia* as this is the seen for women chasing after married men. This is not

the lower class. So it cannot be one of the Mother Mary everyday 100 medicines.

BOENNINGHAUSEN: It is not indicated. And although I used these of the selected polycrest by Hahnemann, these are not the medicines to use.

Typist: Boenninghausen talked about a case where the woman was hospitalized on *Lycopodium* 10M.

BOENNINGHAUSEN: The doctor had to antidote it, then give a lower dose. *Lycopodium* is such a deep acting medicine as it is in age a moss into the thousands of years. You cannot use any of the repertories without knowing the medicines.

Typist: Boenninghausen pointed out *Spongia*.

BOENNINGHAUSEN: I said that Mother Mary prescribed this medicine for a New York policeman who had not been well since being strangled. Sponges are known for their modality *or their function* which is to return to its natural size. It is used for severe coughs where the lungs are not in order, this you know.

Typist: You can see that key concepts such as modality, you do not understand. And Mother Mary pointed this out, that your word for modality is not the same meaning. It means seeing how a medicine functions. Matching it to how a patient functions.

In order for you to see that the proving symptoms of Hahnemann were not how to study your medicines, I will give you an example of *Corn Whiskey* and *Bourbon Whiskey*. These two substances you do not use as medicine.

Corn whiskey is made in short months. It is made in uncharred barrels whereas bourbon is made in refined charred barrels and takes many more months to make. Now you see the design of the whisky bottles. If you had a virus in which it

primarily affected children such as measles, which of the medicines would you give:

Corn whiskey or Bourbon whiskey?

BOENNINGHAUSEN: It would be the corn whiskey for the more immature class. This is where Hahnemann fails. He is not people oriented. Even Boger would look at the eyes of patients to see if they were lying, prevaricating, hiding something. And this is not what you do, you are not serving people, you are serving Hahnemannian pharmacology.
